34. (NEW) A forearm extension for use in an extension arm that adjustably mounts a device to a support mount and conceals cables to and from the device within said forearm extension, said forearm extension comprising:

a body having an interim region and first and second ends;

a first end coupling formed by at least a first wall disposed at a first end of said body for attaching to the device; and

a second end coupling formed by at least a second wall disposed at a second end of said body, said second end coupling having a slot formed in said second wall so that said second end coupling and said interior region of said body are in communication with each other through said slot.

35. (NEW) The forearm extension of claim 34, wherein said second end coupling has a set screw contained in said second wall.

36. (NEW) The forearm extension of claim 34, wherein an inner surface of said second wall has a plurality of grooves formed therein.

37. (NEW) The forearm extension of claim 34, wherein said first end coupling has a set screw contained in said first wall thereof.

38. (NEW) The forearm extension of claim 34, wherein an inner surface of said first wall has a plurality of grooves formed therein.

39. (NEW) The forearm extension of claim 34, wherein said body is U-shaped.

40. (NEW) The forearm extension of claim 39, further comprising a cable holder within said interior region of said body.

41. (NEW) The forearm extension of claim 34, wherein a centerline of said first end coupling and a centerline of said second end coupling are aligned with a longitudinal centerline of said body.

42. (NEW) The forearm extension of claim 34, wherein a lower surface of said body is aligned with a lower edge of said first end coupling and above a lower edge of said second end coupling.

43. (NEW) The forearm extension of claim 34, wherein said body is disposed at an angle between said first end coupling and said second end coupling when said first end coupling and said second end coupling are disposed such that an axial centerline of each is vertical.

44. (NEW) The forearm extension of claim 34, wherein said body is horizontally disposed between said first end coupling and said second end coupling when said first end coupling and said second end coupling are disposed such that an axial centerline of each is vertical.
